

Visual Hacking Risk Areas: Healthcare

Where privacy may be needed?

Questions and answers to determine the need for privacy protection

Monitors and laptops

Are patient records, also called PHI (Protected Health Information), displayed on the screen?

Is the computer in a location where unauthorized people are present or could potentially walk by and view information on the screen?

Is the computer located by a window or other location where unauthorized people can view the screen?

We recommend you apply 3M™ Privacy Filters to your screen displays to help protect your company and clients' data from visual hacking.

Tablets and mobile devices

Do any of your personnel use mobile devices to access patient records and PHI?

Are the mobile devices ever used in public or other areas where unauthorized people can possibly view the device screen?

We recommend you apply a 3M™ Privacy Filter to your tablet or smartphone to help protect your data and minimize risk of exposure to visual hacking.
