

6 Litre Foam Fire Extinguisher

General Features

- Pre checked and ready for mounting
- Light weight aluminium
- Eco-Foam, which has a reduced impact on the environment.
- Safety pin to reduce inadvertent discharge
- Pressure gauge to indicate internal pressure
- Supplied with wall mounting bracket
- Fully refillable and serviceable
- Spare parts available

AFFF (Aqueous Film-Forming Foam) extinguishers are typically used on fires involving Class A (Solid Combustible) and Class B (Flammable Liquid) risks, as they quickly extinguish the flame and are effective in preventing re-ignition.

They are 94% – 97% water, with a foam additive and work on solid fires by wetting and cooling the lighting object. The foam discharge also forms a physical barrier to prevent oxygen from re-igniting the flame, which is what makes this extinguisher particularly effective on contained liquid fires.

All of our AFFF units are manufactured in accordance with IS EN3 and the European Pressure Equipment Directive and come with a 21-A Rating.

Also available in 2 and 9 litre versions or the equivalent environmentally sensitive 6 Litre Water Extinguisher

Usually dispatched within 2 – 3 working days

**Ready for Mounting

For peace of mind, all our portable fire extinguishers are pre weighed, checked and labelled in accordance with Irish Standard 291:2015 prior to dispatch from our warehouse.

Extinguishers should be commissioned on site by a competent person.

Fire products direct has a nationwide network of qualified engineers.
